# Cottage Tulips

These bloom about the same time as Darwin and Breeder Tulips and comprise many beautiful colors that are not to be found in those classes. The flowers are of a more pointed and often of reflexed form, many of which are deliciously perfumed.

Tulips make one of the most attractive and showy bedding flowers. The variety of colors and earliness to bloom make them particularly desirable.

In preparing a bed have it so shaped that it will shed water, and the soil should be worked deep and made rich. Plant from 3 to 4 inches deep, according to the stiffness of the soil, and 6 inches apart each way, and protect with leaves or coarse manure.

## FANTASY

The Finest Tulip Novelty of Recent Introduction

FANTASY is a glorious Parrot-type Tulip with a straight, strong stem, and is a sport from the Darwin Tulip, Clara Butt. It has exactly the same beautiful true pink color, except that the inside of the flower is more intense, while it has the shape of a Parrot Tulip. The petals of this quaint and beautiful flower are laciniated, the outer sides or backs being artistically marked with apple-green. It grows to the same height as Clara Butt and blooms at the same time outdoors.

# Hyacinths

**CULTURE IN POTS:** Use any good soil, mixed with sand, potting so as to leave the top of the bulb even with the soil. For a single plant use a 4 or 5-inch pot; but the effect will be prettier if several bulbs are planted in a larger pot, and still more effective if all are of one color. Press the soil firmly around the bulbs, but do not pack it underneath. Water thoroughly and place in cool, dark place for 4 or 5 weeks, watering about every 10 days, enough to keep the soil moist.

**A still better plan** is to sink the pot in the earth about 6 inches, covering with soil, choosing a location that is not too wet. For a succession of bloom, bring the first out about December 1st, and every 2 weeks thereafter until February 1st. Keep moderately warm and when they begin to bloom, give plenty of water, and as much fresh air as possible. Too much heat dries up the flower and shortens the blooming period.

**CULTURE IN OPEN GROUND:** Any good garden soil will suit Hyacinths, and the planting depth should be determined by the character of the soil. If clay or very heavy, do not cover more than 3 inches; if light, from 4 to 6 inches. Protect with manure, leaves or coarse litter to prevent freezing.

These bulbs are all good sized flowering bulbs, much larger than the ordinary mixed Hyacinths, and give excellent satisfaction for general forcing, for cut flowers, or outdoor garden blooming in beds or borders.

A reselected strain of the very largest flowered sorts, ranging in color from almost pure white, through various shades of pink, to the deepest scarlet; some with beautiful markings and mottled throats. Can supply in mixed colors only. Ready November 1st. 45c each; \$4.75 per doz.

## Giant White Narcissus

The Most Satisfactory Winter-Blooming House Plant

They will bloom in water from 6 to 8 weeks from time of planting, if not planted too early, and are superior to Chinese Lilies or any other Narcissus for growing in water. The flowers are larger, more attractive in color and very fragrant. A very unique and simple way to grow them is to place 6 or 8 bulbs in a shallow bowl with water; support the bulbs with pebbles, and place the bowl in the dark until the roots have started, when they should be brought into the light. Change the water occasionally to keep it pure. From our experiments November, December and January plantings give best results.

Excellent for growing in water, and when grown this way will bloom in from 8 to 10 weeks. Plant 6 to 8 bulbs in a bowl and give the same treatment as Giant White Narcissus. Large bulbs, each, 15c; \$1.25 per doz.; \$8.00 per 100.

## How to Grow Daffodils

**CULTURE IN WATER:** See under description of Giant White Narcissus for growing in water.

**CULTURE OUT-OF-DOORS:** All varieties of Narcissus should be grown in clumps and patches in every suitable spot, and there is not a spot where grass will grow in which Narcissus will not succeed. In planting be guided by the size of the bulb, allowing 4 to 5 inches between small sorts and 6 to 8 inches between large varieties. The bulbs will soon completely fill the space, forming a compact mass, and it is then their flowers are produced the most freely. Plant about 5 inches deep, according to the size of the bulb.

Among early spring flowers these are in the front rank of popularity. Appearing just after winter, they animate our gardens with masses of gold and silver, while their fragrant blossoms in the home are invaluable for decorative purposes.

# Bulbs for the Rock Garden

Scilla Sibirica

Ready about October 15th. Large roots, 35c each; \$3.75 per doz.

**CHIONODOXA** (Glory-of-the-Snow). One of the earliest of our spring flowers. Bright blue, with large, clear white center. 40c per doz.; \$2.50 per 100.

**CROCUS** One of the earliest blooming spring flowers and very effective in lawns and borders. They show off very prettily when planted in the turf of a lawn. When planting in the lawn, make a small hole about 2 inches deep with a dibble or sharp-pointed stick, and then cover with a little extra soil. They can be planted in this way without disturbing the appearance of the lawn. After flowering, the cutting of the grass does not injure the bulbs, and they will appear year after year, proving an ever-recurring delight in the early spring. They are also very useful to plant in Hyacinth or Tulip beds between the rows, thereby giving a succession of early flowers. Set the bulbs 2 inches deep and 2 or 3 inches apart and plant as early in the fall as possible.

## Large Flowering Named Crocus

Flowers much larger and borne in greater profusion than the mixed sorts. These bloom well in the house, planted 2 inches apart in shallow boxes of loamy soil.

**ERANTHIS HYEMALIS** (Winter Aconite). Early in spring the golden blossoms look charming, resting on an emerald-green cushion of leaves, and forming a striking contrast to the Snowdrops, Scillas and Chionodoxas. The foliage remains long after the flowers, making the plant especially valuable in moist situations, such as under trees, which the Winter Aconite enjoys, and where few other flowering plants will thrive. Plant firmly, 2 inches deep, about 15 bulbs to the square foot. 40c per doz.; \$2.50 per 100.

**FRITILLARIA** Singular dwarf spring-flowering plants, bearing large pendent, bell-shaped flowers of various colors—yellow, white, black, purple, striped and splashed—and checkered in the most curious way. **WHITE.** 40c per doz.; \$2.75 per 100.

**RANUNCULUS** Plant and treat same as Anemones. Mixed Colors, 65c per doz.; \$4.25 per 100.

Snowdrops

**SCILLA CAMPANULATA** (Wood Hyacinth). Bears spikes 15 inches high of bell-like flowers, during early May. Plant 5 or 6 inches deep in shady situations. Very effective for borders; will grow under fir or pine trees. White, Blue and Rose, 40c per doz.; \$2.50 per 100.
